3.	The site is a yellow stained area that was discovered in the layback of the western end of the 100-C-7:1 waste site while excavating in May 2011. The stained area was visible approximately 65 m (213 ft) west of the 183-C sedimentation basins just north of the Head House. This discovery was later determined to be inclusive of the existing 100-C-7:1 waste site, and is therefore not accepted as a new waste site.						
4.	Is the site a Solid Waste Management Unit? Any discernible location at the Facility where solid wastes have been placed at any time, irrespective of whether the location was intended for the management of solid or dangerous waste, and includes any area at the Facility at which solid wastes have been routinely and systematically released (for example						
,	through spills), and includes dangerous waste treatment, storage, and disposal units.
